                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     20202020202020202020202020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     cc polymucleotides are also used in diagnostics as expressed sequence tags cc for identifying expressed genes. (I) is useful in gene therapy techniques cc to restore normal activity of (II) or to treat disease states involving cc (II). (II) is useful for generating antibodies against it, detecting or c quantitating a polypeptide in tissue, as molecular weight markers and as cc a food supplement. (II) and its binding partners are useful in medical cc imaging of sites expressing (II). (I) and (II) are useful for treating cc disorders involving aberrant protein expression or biological activity. Cc The polypeptide and polynucleotide sequences have applications in cc diagnostics, forensics, gene mapping, identification of mutations cc responsible for genetic disorders or other traits to assess biodiversity cand to produce other types of data and products dependent on DNA and cc diagnostic amino acid sequences. ABG00010-ABG30377 represent novel human cc diagnostic amino acid sequences. Abgounces of the invention.

Cc specification, but was obtained in electronic format directly from WIPO application, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     CC The present invention relates to novel human coding sequences
CC (AB099268-AB099608) and proteins (ABP6482-ABP65022). The sequences are
CC useful in therapeutic, diagnostic and research methods. The
CC polynuclectides may be used in the field of molecular biology as
CC for the recombinant production of protein, or in generation of anti-sense
CC DNA or RNA. The polynuclectides are useful in diagnostics as expressed
CC markers, or as nutritional sources or supplements. The proteins may be used as molecular weight
CC markers, or as nutritional sources or supplements. The proteins may be
CC used to maintain and expand cell population in a totipotential or
CC pluripotential state useful for re-engineering damaged or diseased
CC tissues, transplantation, manufacture of bio-pharmaceuticals or the
CC development of bio-sensors. The polynucleotides and proteins are useful
CC rorein expression or biological activity, e.g. haematopoietic disorders,
CC central/peripheral nervous system diseases, mechanical and traumatic
CC contral/peripheral nervous system diseases, mechanical and traumatic
CC disorders, non-healing wounds, immune deficiencies and disorders,
CC disorders, or cancer. The polynucleotide sequencies of the invention were
CC assembled from ESTs isolated mainly by sequencing by hybridisation, and
CC in some cases, sequences obtained from one or more public databases.
CC Stephing of the printed control of the printed
CC cat fire, wiso. intrub/published not sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The CC and gene mapping, and in recombinant production of (II). The CC constant from the CC polymucleotides are also used in diagnostics as expressed sequence tags CC in itentifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating CC disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in CC diagnostics, forensics, gene mapping, identification of mutations in CC constitution of produce other types of data and products dependent on DNA and CC amino acid sequences ABG00010-ABG30377 represent novel human CC diagnostic amino acid sequences of the invention.

CC Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO as formation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                              Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to antisense inhibitors of genes essential to CC prokaryotic cellular proliferation, their use in identifying the CC genes, their use in the discovery of novel antibiotics, the essential CC genes themselves and the encoded proteins. The prokaryotes used are Escherichia coli, Staphylococcus aureus, Salmonella typhi, Klebsiella CC pneumoniae, Pseudomonas aeruginosa and Enterococcus faecalis. The CC invention is also useful for the identification of potential new targets CC for antibiotic development. The antisense nucleic acids can also be used to identify proteins used in proliferation, to express these proteins, CC and to obtain antibodies capable of binding to the expressed proteins. CC The proteins can be used to screen compounds in rational drug discovery CC programmes. The antisense nucleic acid sequence is also useful to screen CC programmes. The antisense nucleic acid sequence is also useful to screen CC a wide variety of organisms. The present sequence represents an CC essential prokaryotic cellular proliferation protein. CC Note: The sequence data for this patent did not form part CC format directly from WIPO at CC format directly from WIPO at CC format directly from WIPO at

The gene can be used to generate fusion proteins by linking to the gene to a human immunoglobulin FC CC portion (e.g. AAX84924) for increasing the stability of the fused CC protein as compared to the human protein only.

CC The invention relates to 125 novel genes and their fragments (nucleic CC acid sequences: AAX84933-X85057; amino acid sequences AAY27567-Y27933) CC which are useful for preventing, treating or ameliorating medical CC conditions e.g. by protein or gene therapy. Also, pathological CC conditions can be diagnosed by determining the amount of the new polypurcleotides. Specific uses are described for each of the 125 polynucleotides, based on which tissues they are most highly expressed in (see AAX8493) for described uses).

The polynucleotide and protein are predicted to have biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals. Some predicted biological activities include cytokine and cell proliferation/ differentiation activity, immune stimulating (e.g. as vaccines) or suppressing activity, haematopoiesis regulating activity, tissue growth activity, activin/inhibin activity, chemotactic/chemokinetic activity, hemostatic and thrombollytic activity, receptor/ligand activity, anti-inflammatory activity, cadherin/tumour invasion suppressor activity, and formation activity. The polynucleotide encoding secreted

The protein may exhibit cytokine, cell proliferation or cell differentiation activity or may induce production of other cytokines in certain cell populations and may exhibit immune stimulating or immune suppressing activity, which is useful for the treatment of various immune deficiencies and disorders e.g. severe combined immunodeficiency (SCID), autoimmune disorders e.g. multiple sclerosis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynucleotides (ABA90876-ABA90968 and ABA90980) and encoded proteins (ABB55890-ABB55800), especially polynucleotides SEQ ID NO 1 (ABA90876) and SEQ ID NO 19 (ABA90885) and proteins SEQ ID NO 2 (ABB55698-ABA90876) and SEQ ID NO 20 (ABB55707) contained in clones bd306-7 and yb8-1 respectively and the clones bd306-7 and yb8-1 are deposited with the American Type Culture Collection (ATCC) with accession number 98599. The polynucleotides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary, respectives activing the polynucleotides and encoded polypeptides have cytostatic, anti-inflammatory, immunomodulator, vulnerary.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   30-JAN-1998;

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
